

Water + Wildlife

Why I like the Sonoran Desert? It is a unique place. It has lots of things. You might just think it is sand and tumbleweeds... n.o.p.e you are wrong. That is not what you should think because it is a lot more than that.

It is like a dry rainforest but just as cool, it could even be cooler than that.

It does have tumbleweeds and cactus and sand and whatever else you think. But were you thinking of water? If you were, you are correct!!!

Every year around January, February, March and sometimes April it rains. A lot. And don't forget December too - hahaha!

All that water falls right? But where does it fall?? It falls in a big thing they call it *The Loop*, it goes all over town and the water flows there. It is super cool and something else that is super cool, there is so much wildlife here; rabbits, lizards deers coyotes, bobcats and so much more. I bet I can list about 150 million but not right now. The mountain sides are beautiful, gorgeous, magnificent. They might just look like mountains, but they are not just that...just look at those things W-O-W they are so beautiful right? And if you think so too, please come visit Tucson, Arizona soon. Thank you.
